**Re:** SSI fine bubble diffusers

---

We installed over a thousand SSI 9 fine bubble disk diffusers in 1997 and are still operating with the original membranes. Since installing the diffusers, the plant has met its effluent requirements and we are thoroughly satisfied with the aeration system applied by SSI. We are going to replace the 30-year-old blowers this year with high efficiency single stage blowers, however we have no plans to change the diffusers or membranes at this time.

The Ford Road WWTP serves a population of 13,000 and is rated for 3.6 MGD.
