Dear Tom,

SKG installed a complete MBR plant for treatment of leachate wastewater in Portugal in the beginning of this year.

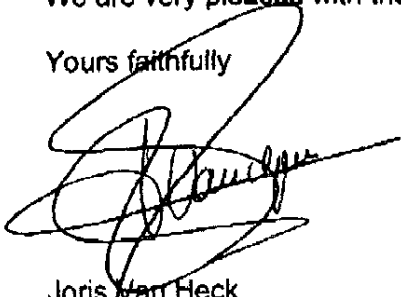

We purchased the complete in-tank aeration system from SSI. The aeration system is based on your Airflex Tube Diffusers.

SKG finished the installation in July 2003. The whole system was pre-fabricated by SSI. We assembled the piping on site in a very short period of time. We were impressed by the easy and quick mounting of the aeration tubes due to the super saddle used by your company.

The plant was started-up soon after completion and the effluent characteristics are fully complying with the consent levels.

We are very pleased with the performance of the aeration system.

Yours faithfully

Joris Van Heck
